

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Question: 1

Which three pieces of information are considered while deciding the size of the undo tablespace in your database? (Choose three.)

- A. the size of an undo block
- B. the size of the redo log files
- C. undo blocks generated per second
- D. the size of the database buffer cache
- E. the value of the UNDO_RETENTION parameter

Answer: A, C, E

Question: 2

You executed the STARTUP MOUNT command to start your database. For which database operation do you need to start the database in the MOUNT state?

- A. renaming the control files
- B. dropping a user in your database
- C. enabling or disabling redo log archiving
- D. dropping a tablespace in your database
- E. re-creating the control files, after you lost all the control files in your database

Answer: C

Question: 3

You want to create a new optimized database for your transactional production environment to be used by a financial application. While creating the database, you want the Oracle software to take care of all basic settings to optimize the database performance. Which method would you use to achieve this objective?

- A. Use the CREATE DATABASE .. command to create the database with Oracle-managed files.
- B. Use the Database Configuration Assistant (DBCA) to create the database with Oracle-managed files.
- C. Use Enterprise Manager to create a new database with the Online Transaction Processing (OLTP) option.
- D. Use Database Configuration Assistant (DBCA) to create the database with Transaction Processing template.
- E. Use the CREATE DATABASE .. command to create the database with Automatic Storage Management (ASM) file system.

Answer: D

Question: 4

Which three statements are true about the stages of database startup? (Choose three.)

- A. Data files and redo log files can be renamed at the MOUNT stage.
- B. Control files are read at the OPEN stage for the location of data files.
- C. Control files are required to bring the database to the NOMOUNT stage.
- D. Data files and redo log files are made available to users at the OPEN stage.
- E. Data files and online redo log files are checked for consistency while opening the database.

Answer: A, D, E

Question: 5

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

A constraint in a table is defined with the INITIALLY IMMEDIATE clause. You executed the ALTER TABLE command with the ENABLE VALIDATE option to enable the constraint that was disabled. What are the two effects of this command? (Choose two.)

- A. It fails if any existing row violates the constraint.
- B. It does not validate the existing data in the table.
- C. It enables the constraint to be enforced at the end of each transaction.
- D. It prevents insert, update, and delete operations on the table while the constraint is in the process of being enabled.

Answer: A, D

Question: 6

You received complaints about the degradation of SQL query performance. You identified top SQL queries that consume time. What would be your next step to find out recommendations about statistics collection and restructuring of the SQL statement to improve query performance?

- A. run Segment Advisor
- B. run SQL Tuning Advisor on top SQL statements
- C. run the Automatic Workload Repository (AWR) report
- D. run the Automatic Database Diagnostic Monitor (ADDM) on top SQL statements

Answer: B

Question: 7

The UNDO_RETENTION parameter in your database is set to 1000 and undo retention is not guaranteed. Which statement regarding retention of undo data is correct?

- A. Undo data becomes obsolete after 1,000 seconds.
- B. Undo data gets refreshed after every 1,000 seconds.
- C. Undo data will be stored permanently after 1,000 seconds.
- D. Committed undo data would be retained for 1,000 seconds if free undo space is available.
- E. Undo data will be retained in the UNDO tablespace for 1,000 seconds, then it gets moved to the TEMPORARY tablespace to provide read consistency.

Answer: D

Question: 8

View the Exhibit.

Which statement regarding the dept and emp tables is true?

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

```

SQL> SELECT * FROM dept;

  DEPTNO DNAME          LOC
-----
    10 ACCOUNTING      NEW YORK
    20 RESEARCH        DALLAS
    30 SALES            CHICAGO
    40 OPERATIONS       BOSTON

4 rows selected.

SQL> SELECT * FROM emp;

  EMPNO ENAME      JOB              MGR HIREDATE          SAL        COMM      DEPTNO
-----
    7369 SMITH      CLERK              7902 17-DEC-80          800             20
    7499 ALLEN      SALESMAN           7698 20-FEB-81         1600             30
    7521 WARD       SALESMAN           7698 22-FEB-81         1250             30
    7566 JONES      MANAGER            7839 02-APR-81         2975             20
    7654 MARTIN    SALESMAN           7698 28-SEP-81         1250            1400             30
    7698 BLAKE     MANAGER            7839 01-MAY-81         2850             30
    7782 CLARK     MANAGER            7839 09-JUN-81         2450             10
    7788 SCOTT     ANALYST            7566 19-APR-87         3000             20
    7839 KING      PRESIDENT          17-NOV-81         5000             10
    7844 TURNER    SALESMAN           7698 08-SEP-81         1500             30
    7876 ADAMS     CLERK              7788 23-MAY-87         1100             20

  EMPNO ENAME      JOB              MGR HIREDATE          SAL        COMM      DEPTNO
-----
    7900 JAMES      CLERK              7698 03-DEC-81          950             30
    7902 FORD      ANALYST            7566 03-DEC-81         3000             20
    7999 JHON      CLERK              7782 10-MAY-83         1500             10

14 rows selected.

SQL> ALTER TABLE dept ADD CONSTRAINT pk_dept PRIMARY KEY(deptno);

Table altered.

SQL> ALTER TABLE emp ADD CONSTRAINT fk_emp FOREIGN KEY(deptno) REFERENCES dept(deptno) ON
DELETE CASCADE;

Table altered.

```

- A. When you delete a row from the emp table, you would receive a constraint violation error.
- B. When you delete a row from the dept table, you would receive a constraint violation error.
- C. When you delete a row from the emp table, automatically the corresponding rows are deleted from the dept table.
- D. When you delete a row from the dept table, automatically the corresponding rows are deleted from the emp table.
- E. When you delete a row from the dept table, automatically the corresponding rows are updated with null values in the emp table.
- F. When you delete a row from the emp table, automatically the corresponding rows are updated with null values in the dept table.

Answer: D

Question: 9

Which three statements are correct about temporary tables? (Choose three.)

- A. Indexes and views can be created on temporary tables.
- B. Both the data and the structure of temporary tables can be exported.
- C. Temporary tables are always created in a user's temporary tablespace.
- D. The data inserted into a temporary table in a session is available to other sessions.
- E. Data manipulation language (DML) locks are never acquired on the data of temporary tables.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: A, C, E

Question: 10

Which statement regarding the contents of the V\$PARAMETER view is true?

- A. displays only the list of default values
- B. displays only the list of all basic parameters
- C. displays the currently in effect parameter values
- D. displays only the list of all advanced parameters
- E. displays the list of all the parameter files of a database
- F. displays the current contents of the server parameter file

Answer: C

Question: 11

According to your backup strategy, you performed an incremental level 0 backup of your database. Which statement regarding this backup is true?

- A. The backup is similar to image copy.
- B. The backup contains all used data blocks.
- C. The backup contains only unused data blocks.
- D. The backup contains all data blocks changed since the last incremental level 1 backup.

Answer: B

Question: 12

Which step do you need to perform to enable a user with the SYSDBA privilege to log in as SYSDBA in iSQL*Plus?

- A. The user must be granted the database administrator (DBA) privilege.
- B. The user must be listed in the password file for the authentication.
- C. No special setup is needed for the user to connect as SYSDBA in iSQL*Plus.
- D. Set up a user in the Oracle Application Server Containers for J2EE (OC4J) user manager, and grant the webDbA role to the user.

Answer: D

Question: 13

Because of a power outage, instance failure has occurred. From what point n the redo log does recovery begin and where does it end?

- A. current redo log and inactive redo log
- B. checkpoint position to end of redo log
- C. beginning of redo log to end of redo log
- D. all redo logs before the point of last commit
- E. beginning of redo log to checkpoint position

Answer: B

Question: 14

Which two statements are true regarding the database in ARCHIVELOG mode? (Choose two.)

- A. You have to shut down the database to perform the backups.
- B. Archiving information is written to the data files and redo log files.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- C. You can perform complete database backups without closing the database.
- D. Online redo log files have to be multiplexed before putting the database in ARCHIVELOG mode.
- E. All the previous database backups become invalid after you configure the database to ARCHIVELOG mode.

Answer: C, E

Question: 15

User Scott has updated the salary of one of the employees in the EMPLOYEES table and has not committed the transaction. What are the two types of locks that this scenario would lead to? (Choose two.)

- A. null lock on the row being updated
- B. null lock on the table containing the row
- C. ROW SHARE lock for the row being updated
- D. ROW EXCLUSIVE lock for the row being updated
- E. shared row-exclusive lock for the row being updated
- F. a shareable table lock for the table containing the row
- G. exclusive table-level lock for the table containing the row

Answer: D, F

Question: 16

You notice this warning in the alert log file:

ORA-19815: WARNING: db_recovery_file_dest_size of 3221225472 bytes is 100.00% used, and has 0 remaining bytes available. What would you do to reclaim the used space in the Flash Recovery Area?

- A. Back up the Flash Recovery Area.
- B. Increase the retention time for the files.
- C. Decrease the retention time for the files.
- D. Manually delete all the archived log files from the Flash Recovery Area by using operating system (OS) commands.

Answer: A, C

Question: 17

View the Exhibit and examine the output.
Which statement describes the conclusion?

Expand All Collapse All	
Duplicates	Plan Hash Value SQL Text
▼ Duplicates	
▼ 3	3956160932 SELECT * FROM EMP WHERE DEPTNO=20
	3956160932 SELECT * FROM EMP WHERE DEPTNO=20
	3956160932 SELECT * FROM EMP WHERE DEPTNO=30
	3956160932 SELECT * FROM EMP WHERE DEPTNO=10
▼ 2	3956160932 SELECT ENAME FROM EMP WHERE SAL>2500
	3956160932 SELECT ENAME FROM EMP WHERE SAL>2500
	3956160932 SELECT ENAME FROM EMP WHERE SAL>2000

- A. The users should use bind variables instead of literals in the query.
- B. The dictionary cache is consuming more space than the library cache.
- C. The shared pool size should be increased to accommodate the SQL statements.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

D. Preparing indexes on the tables used in the SQL statements would improve the library cache performance.

Answer: A

Question: 18

Which two operations require undo data? (Choose two.)

- A. committing a transaction
- B. rolling back a transaction
- C. recovering from failed transactions
- D. recording a transaction to redo log files
- E. rolling forward during instance recovery

Answer: B, C

Question: 19

Your database is configured in NOARCHIVELOG mode. All the control files have been lost due to a hard disk failure but the data files are not lost. You have the closed whole database backup available to you. Which two statements are true in this scenario? (Choose two.)

- A. The instance aborts.
- B. The database cannot be recovered.
- C. The database can be recovered by restoring the control files from the backup.
- D. The database remains opened and you have to shut it down with the ABORT option.
- E. The database can be restored till the point of the last closed whole database backup.

Answer: A, E

Question: 20

Which is the correct description of the significance of the ORACLE_HOME environmental variable?

- A. It specifies the directory containing the Oracle software.
- B. It specifies the directory containing the Oracle-Managed Files.
- C. It specifies the directory for database files, if not specified explicitly.
- D. It specifies the base directory of Optimal Flexible Architecture (OFA).

Answer: A

Question: 21

While running the Oracle Universal Installer on a Unix platform to install Oracle Database 10g software, you are prompted to run oraInstRoot.sh script. What does this script accomplish?

- A. It creates the pointer file.
- B. It creates the base directory.
- C. It creates the Inventory pointer file.
- D. It creates the Oracle user for installation.
- E. It modifies the Unix kernel parameters to match Oracle's requirement.

Answer: C

Question: 22

You find that the database performance degrades while you backup the PROD database using Recovery Manager (RMAN). The PROD database is running in shared server mode. The

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

database instance is currently using 60% of total operating system memory. You suspect the shared pool fragmentation to be the reason. Which action would you consider to overcome the performance degradation?

- A. Configure Java Pool to cache the java objects.
- B. Configure Streams Pool to enable parallel processing.
- C. Increase Shared Pool size to cache more PL/SQL objects.
- D. Increase Database Buffer Cache size to increase cache hits.
- E. Configure Large Pool to be used by RMAN and shared server.
- F. Increase the total System Global Area (SGA) size to increase memory hits.

Answer: E

Question: 23

Your database is started with SPFILE. You want the database instance to be dynamically registered with a listener L2 with the following details:

Protocol: TCP
Host: indl151e
Port: 1525

Which is the correct order of the steps that you would follow to achieve this?

1. Set the LOCAL_LISTENER parameter to L2 dynamically.
 2. Make an entry for L2 in tnsnames.ora on the database server.
 3. Restart L2.
 4. Modify the listener.ora file to add the instance name in SID_LIST of L2.
- A. 1, 2, 4, 3
 - B. 1, 2, 3; 4 is not required.
 - C. 2, 1; 3 and 4 are not required.
 - D. 1, 2; 3 and 4 are not required.

Answer: C

Question: 24

The junior DBA in your organization has accidentally deleted the alert log file. What will you do to create new alert log file?

- A. Create the new text file file as ALERT.LOG.
- B. You have to recover the alert log file from the valid backup.
- C. Change the value for the BACKGROUND_DUMP_DEST parameter.
- D. No action required. The file would be created automatically by the instance.

Answer: D

Question: 25

A user complains that he gets the following error message repeatedly after executing some SQL statements. The error message forces the user to log off from and log on to the database to continue his work.

ORA-02392: exceeded session limit on CPU usage, you are being logged off
Which action would you take to increase the session limit on CPU usage?

- A. Modify the profile assigned to the user.
- B. Modify the roles assigned to the users.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- C. Modify the object privileges assigned to the user.
- D. Modify the system privileges assigned to the users.
- E. Modify the value for the RESOURCE_LIMIT parameter in the parameter file.

Answer: A

Question: 26

While setting up an Oracle database for one of your critical applications, you want to ensure that the database is backed up at regular intervals without your intervention. What should you do to achieve the objective?

- A. configure the database to run in ARCHIVELOG mode
- B. configure the Flash Recovery Area to enable automatic database backup
- C. schedule the database backup using DBMS_JOB package after creating the database
- D. schedule the database backup using Recovery Manager (RMAN) commands after creating the database
- E. schedule the database backup using Database Configuration Assistant (DBCA) while creating the database

Answer: E

Question: 27

Which two statements about Flashback Query are true? (Choose two.)

- A. It is generated by using the redo log files.
- B. It helps in row-level recovery from user errors.
- C. It can be performed to recover ALTER TABLE statements
- D. It fails when undo data pertaining to the transaction is overwritten.
- E. The database has to be opened with the resetlogs option after performing Flashback Query.

Answer: B, D

Question: 28

As a result of performance analysis, you created an index on the prod_name column of the prod_det table, which contains about ten thousand rows. Later, you updated a product name in the table. How does this change affect the index?

- A. A leaf will be marked as invalid.
- B. An update in a leaf row takes place.
- C. The index will be updated automatically at commit.
- D. A leaf row in the index will be deleted and inserted.
- E. The index becomes invalid when you make any updates.

Answer: D

Question: 29

View the Exhibit.

Your Oracle 10g database has 6 tablespaces in which:

- TEMP is the default temporary tablespace
- UNDOTBS1 is the default undo tablespace
- USERS is the default permanent tablespace

In this database, which two tablespaces can be made read only? (Choose two.)

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Edit View Delete Actions Add Datafile Go								
Select	Name	Type	Extent Management	Segment Management	Status	Size (MB)	Used (MB)	Used (%)
<input checked="" type="radio"/>	USERS	PERMANENT	LOCAL	AUTO	ONLINE	5.000	2.750	55.00

- A. TEMP
- B. PROD
- C. USERS
- D. SYSAUX
- E. SYSTEM
- F. UNDOTBS1

Answer: B, C

Question: 30

You suspect unauthorized data manipulation language (DML) operations on a particular table. You want to track users who are performing the transactions and the values used in the transactions. Also, you plan to transfer these values to another table for analysis. How would you achieve this?

- A. by using triggers
- B. by using external tables
- C. by using anonymous PL/SQL blocks
- D. by auditing all DML operations on the table

Answer: A

Question: 31

You are using the backup scheduler in Enterprise Manager (EM) to schedule a backup of your database. Which type of script does the backup scheduler generate?

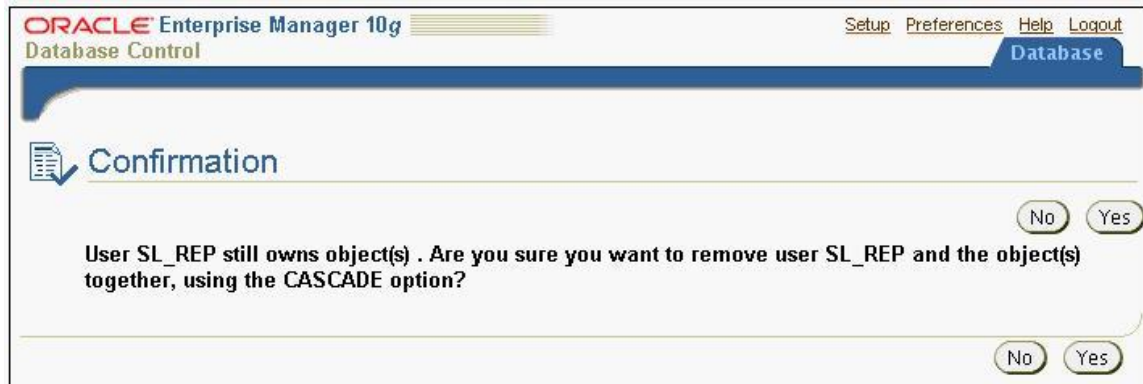

- A. SQL script
- B. PL/SQL script
- C. Operating System (OS) script
- D. Enterprise Manager (EM) script
- E. Recovery Manager (RMAN) script

Answer: E

Question: 32

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

View the Exhibit to observe the message received while trying to drop the SL_REP user in Oracle Enterprise Manager. The SL_REP user owns objects and is currently connected to the database instance. What would happen if you click YES in the Exhibit?

- A. An error is returned, and the user is not dropped.
- B. The drop operation waits until the session started by the user ends.
- C. The user is dropped successfully, and the session started by the user is killed.
- D. The user is dropped, and the objects owned by the user are transferred to the recycle bin.

Answer: A

Question: 33

User SCOTT executes the following command on the EMP table but has not issued COMMIT, ROLLBACK, or any data definition language (DDL) command:

```
SQL> SELECT job FROM emp
```

```
2 WHERE job='CLERK' FOR UPDATE OF empno;
```

SCOTT has opened another session to work with the database. Which three operations would wait when issued in SCOTT's second session? (Choose three.)

- A. LOCK TABLE emp IN SHARE MODE;
- B. LOCK TABLE emp IN EXCLUSIVE MODE;
- C. DELETE FROM emp WHERE job='MANAGER';
- D. INSERT INTO emp(empno,ename) VALUES (1289,'Dick');
- E. SELECT job FROM emp WHERE job='CLERK' FOR UPDATE OF empno;

Answer: A, B, E

Question: 34

You have a text file that maintains information on thousands of items. The end-user application requires the transfer of that information into a table in the database. What would you use to achieve this task? (Choose two.)

- A. Oracle Text
- B. Data Pump
- C. SQL*Loader
- D. Oracle Import
- E. External table

Answer: C, E

Question: 35

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

The SAVE_AMT column in the ACCOUNTS table contains the balance details of customers in a bank. As part of the year-end tax and interest calculation process, all the rows in the table need to be accessed. The bank authorities want to track access to the rows containing balance amounts exceeding \$200,000, and then send an alert message to the administrator. Which method would you suggest to the bank for achieving this task?

- A. implementing value-based auditing by using triggers
- B. implementing fine-grained auditing with audit condition and event handler
- C. performing standard database auditing to audit object privileges by setting the AUDIT_TRAIL parameter to EXTENDED
- D. performing standard database auditing to audit SQL statements with granularity level set to ACCESS

Answer: B

Question: 36

You are creating a locally managed tablespace to meet the following requirements:

All the extents should be of the same size.

The data should be spread across two data files.

A bitmap should be used to record the free space within the allocated extents.

Which three options would you choose? (Choose three.)

- A. set PCTFREE and PCTUSED to 50
- B. specify extent allocation as Uniform
- C. specify extent allocation as Automatic
- D. create the tablespace as bigfile tablespace
- E. create the tablespace as smallfile tablespace
- F. set segment space management to Automatic
- G. use the RESIZE clause while creating the tablespace

Answer: B, E, F

Question: 37

Your test database is running in NOARCHIVELOG mode. What are the implications of this?

- A. You can perform open database backups.
- B. You can perform closed database backups.
- C. You cannot perform schema-level logical backups.
- D. You can perform the backup of only the SYSTEM tablespace when the database is open.

Answer: B

Question: 38

You are in the middle of a transaction and very crucial data has been modified. Because of a hardware failure, the instance has shut down before synchronizing all the database files. Which two statements are true? (Choose two.)

- A. On startup, SMON coordinates instance recovery.
- B. On startup, CKPT coordinates instance recovery.
- C. On startup, use RMAN to perform instance recovery.
- D. Uncommitted changes will be rolled back after the database is opened.
- E. On startup, perform media recovery and then instance recovery.
- F. On startup, all the files will be synchronized and you get both committed and uncommitted data.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: A, D

Question: 39

After being hired as a database administrator, you find that there is only one database that is functional and that is being accessed by the applications. You want to create a replica of the database, to be used for testing purposes. What is the best method to create the replica?

- A. create a database by using CREATE DATABASE .. command and manually copy the data
- B. use Database Configuration Assistant (DBCA) to create a template from the existing database to contain the database structure
- C. use DBCA to create a template from the existing database to contain the database structure and then manually copy the data using Oracle Data Pump
- D. use DBCA to create a template from the existing database to contain the database structure with data files and then use the same template to create the database in the new location

Answer: D

Question: 40

You are working on an online transaction processing (OLTP) system. You notice that a PL/SQL procedure got executed twice at 2:00 p.m. This has incorrectly updated the EMP_SAL table. How would you revert the table to its state at 2:00 p.m.?

- A. Perform point-in-time recovery to 2:00 p.m.
- B. Use Flashback Table feature to revert the changes.
- C. Restore the entire database from the recent backup and open it.
- D. Issue the rollback statement with system change number (SCN).

Answer: B

Question: 41

View the Exhibit.

What would happen if you change the value of Desired Mean Time To Recover to 30?

ORACLE Enterprise Manager 10g
Database Control

Database Instance: oracle > Recovery Settings

Recovery Settings

Logged in As SYS

Show SQL Revert Apply

Instance Recovery

The FAST_START_MTTR_TARGET initialization parameter specifies the number of seconds estimated for crash recovery. Oracle converts this number into a set of internal parameters and sets the recovery time as close as possible to these parameters. Setting FAST_START_MTTR_TARGET to 0 will disable this functionality.

Current Estimated Mean Time To Recover (seconds) 92

Desired Mean Time To Recover 0 Minutes

- A. The MTTR Advisor would be enabled.
- B. The Redo Log Advisor would be disabled.
- C. Automatic checkpoint tuning would be disabled.
- D. The redo log from log buffers would be written to redo log files at a slower rate.

Answer: A

Question: 42

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Due to media failure you lost one of the data files belonging to the USERS tablespace, and the tablespace is not available to use. Which statement regarding the status of the database is true?

- A. The database remains open.
- B. The database gets dismounted.
- C. The database becomes read only.
- D. The database instance gets aborted.
- E. The database gets shut down automatically.
- F. The status of the database depends on the status of the USERS tablespace.

Answer: A

Question: 43

Which two statements are true about the roles in the Oracle database?
(Choose two.)

- A. A role can be granted to itself.
- B. Roles are owned by the SYS user.
- C. Roles can be granted to other roles.
- D. A role cannot be assigned external authentication.
- E. A role can contain both system and object privileges.

Answer: C, E

Question: 44

View the Exhibit to observe the privileges granted to the MGR_ROLE role.
The SCOTT user has been granted the CONNECT and RESOURCE roles only.
The database administrator (DBA) grants MGR_ROLE to the SCOTT user by using this command:

SQL> GRANT MGR_ROLE TO SCOTT WITH ADMIN OPTION;

Which statement is true about the SCOTT user after he is granted this role?

General

Name

MGR_ROLE

Authentication

None

Roles

Role	Admin Option
No items found	

System Privileges

System Privilege	Admin Option
CREATE ROLE	N
CREATE USER	N
SELECT ANY TABLE	N

Object Privileges

Object Privilege	Schema	Object
No items found		

- A. The SCOTT user can grant the MGR_ROLE role and the privileges in it to other users.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- B. The SCOTT user can grant the privileges in the MGR_ROLE role to other users but not with ADMIN_OPTION.
- C. The SCOTT user can grant only the MGR_ROLE role to other users but not the privileges in it.
- D. The SCOTT user can grant the privileges in the MGR_ROLE role to other users but cannot revoke privileges from them.

Answer: C

Question: 45

You want the user APP_DBA to administer the Oracle database from a remote machine. APP_DBA is granted the SYSDBA privilege to perform administrative tasks on the database. Which file is used by the Oracle database server to authenticate APP_DBA?

- A. control file
- B. password file
- C. listener controller file
- D. control file and password file

Answer: B

Question: 46

Which two statements are true about simple views? (Choose two.)

- A. Views can be created as read only.
- B. Views are data segments like tables.
- C. Views can be created on the basis of more than one table.
- D. Data manipulation language (DML) operations cannot be performed on views.

Answer: A, C

Question: 47

While planning to manage more than one database in your system, you perform the following activities:

1. Organize different categories of files into independent subdirectories.
2. Use consistent naming convention for database files.
3. Separate administrative information pertaining to each database.

Which option corresponds to the type of activities performed by you?

- A. Oracle Managed Files
- B. Oracle Grid Architecture
- C. Optimal Flexible Architecture
- D. Oracle database architecture

Answer: C

Question: 48

Which naming method uses the tnsnames.ora file to store the connect descriptor used by the client while connecting to the database instance from a remote machine?

- A. host naming method
- B. local naming method
- C. external naming method
- D. directory naming method

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: B

Question: 49

Your database is running in the ARCHIVELOG mode. You placed a tablespace, tbs_1, offline with the immediate option. Which statement is correct in this scenario?

- A. The operation would fail if tbs_1 were a read-only tablespace.
- B. The operation would fail if tbs_1 were a read/write tablespace.
- C. The operation would fail if tbs_1 were the default tablespace for the database.
- D. If the above operation were successful, media recovery would be required to bring the tablespace online.
- E. If the above operation were successful, instance recovery would be required to bring the tablespace online.

Answer: D

Question: 50

You work in a data warehouse environment that involves the execution of complex queries. The current content of the SQL cache holds the ideal workload for analysis. You want to analyze only few most resource-intensive statements. What would be your suggestion to receive recommendations on the efficient use of indexes and materialized views to improve query performance?

- A. Run the SQL Access Advisor.
- B. Run the SQL Tuning Advisor (STA).
- C. Run the Automatic Workload Repository (AWR) report.
- D. Run the Automatic Database Diagnostic Monitor (ADDM).

Answer: A

Question: 51

You have a large amount of historical data in an operating system file. Some analysts in your organization need to query this data. The file is too large to load into your current database. Which is the most effective method to accomplish the task?

- A. Upgrade the hardware/memory to accommodate the data.
- B. Load the data into your database by using the PARALLEL clause.
- C. Give analysts DBA privilege, so that they can query DBA_EXTERNAL_TABLES.
- D. Use an external table so you can have the metadata available in your database, but leave the data in the operating system files.

Answer: D

Question: 52

A user receives the following error while executing a query:

ORA-01555: snapshot too old

Which two options can be the solutions to avoid such errors in future? (Choose two.)

- A. increase the size of redo log files
- B. increase the size of the undo tablespace
- C. increase the size of the Database Buffer Cache
- D. increase the size of the default temporary tablespace
- E. enable the retention guarantee for the undo tablespace

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: B, E

Question: 53

You executed the following command to export the EMPLOYEES table from a remote machine:

```
$ EXPDP hr/hr@data.us.oracle.com
DUMPFILE=my_dir:exp_hr.log
LOGFILE=data_pump_dir:log_hr.log
TABLES=employees
```

What would be the outcome of this command?

- A. The command would execute successfully and the export dump file would be created in the destination of the directory object MY_DIR.
- B. The command would execute successfully. But log file would not be created as DATA_PUMP_DIR directory is only accessible to user with SYSDBA privilege.
- C. The command fails with an error because DATA_PUMP_DIR directory have higher precedence over the per-file directory.
- D. The command fails with an error because no absolute path is specified for log file and dumpfile.

Answer: A

Question: 54

You execute the following command to audit the database activities:

```
SQL> AUDIT DROP ANY TABLE BY scott BY SESSION WHENEVER SUCCESSFUL;
```

What is the effect of this command?

- A. One audit record is created for the whole session if user SCOTT successfully drops one or more tables in his session.
- B. One audit record is created for every session when any user successfully drops a table owned by SCOTT.
- C. One audit record is created for each successful DROP TABLE command executed by any user to drop tables owned by SCOTT.
- D. One audit record is generated for the session when SCOTT grants the DROP ANY TABLE privilege to other users in his session.
- E. One audit record is created for each successful DROP TABLE command executed in the session of SCOTT.

Answer: A

Question: 55

Examine the following commands executed in your database:

```
SQL> ALTER SESSION RECYCLEBIN=ON;
Session altered
SQL> CREATE TABLE emp TABLESPACE tbsfd AS SELECT * FROM hr.employees;
Table created.
```

Further, you executed the following command to drop the table:

```
SQL> DROP TABLE emp;
Table dropped.
```

What happens in this scenario?

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- A. The table is moved to the SYSAUX tablespace.
- B. The table is moved to the SYSTEM tablespace.
- C. The table is removed from the database permanently.
- D. The table is renamed and remains in the TBSFD tablespace.

Answer: D

Question: 56

Which two statements are true about a bitmap index? (Choose two.)

- A. It is recommended for the columns that have unique values.
- B. It can be converted to a B-tree index by using the ALTER INDEX command.
- C. It has a bitmap segment for each distinct value in the key column, containing a string of bits in which each bit represents the presence or absence of a key column value.
- D. Updating the key column locks the whole bitmap segment that contains the bit for the key value to be updated.

Answer: C, D

Question: 57

Your database is configured with the following parameters related to SGA:

```
SGA_TARGET=256MB
SHARED_POOL_SIZE=32MB
DB_CACHE_SIZE=100MB
LARGE_POOL_SIZE=0
JAVA_POOL_SIZE=0
STREAMS_POOL_SIZE=0
```

Which two statements are true about the configuration? (Choose two.)

- A. The SGA_TARGET value cannot be sized smaller than 100 MB.
- B. The shared pool and the default buffer pool will not be sized bigger than 32 MB and 100 MB, respectively.
- C. The shared pool and the default buffer pool will not be sized smaller than 32 MB and 100 MB, respectively.
- D. 124 MB (256 minus 132) of memory is available for use by all the manually sized components.
- E. 124 MB (256 minus 132) of memory is available for use by all the manually and automatically sized components.

Answer: C, E

Question: 58

The application workload on your database is same between 10 a.m. and 11 a.m. on weekdays. Suddenly you observe poor performance between 10 a.m. and 11 a.m. in the middle of the week. How would you identify the changes in configuration settings, workload profile, and statistics to diagnose the possible causes of the performance degradation?

- A. by using the SQL access advisor
- B. by using the Automatic Workload Repository report
- C. by running the Automatic Database Diagnostic Monitor (ADDM)
- D. by using the Automatic Workload Repository Compare Period report
- E. by analyzing the output of the V\$ACTIVE_SESSION_HISTORY view

Answer: D

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Question: 59

The application development team has developed PL/SQL procedures and functions for different purposes and calls them as and when required. The loading of individual procedures or functions into memory degrades performance with every call. Also, it causes a security problem for individual subprograms and loss of program units when the whole system is transported into a new location. Which method would you recommend to the application developers to solve this problem?

- A. avoiding the use of cursors in the subprograms
- B. using anonymous PL/SQL blocks instead of subprograms
- C. referring to views instead of tables inside the subprograms
- D. creating PL/SQL packages to include interrelated subprograms

Answer: D

Question: 60

Which three pieces of information are to be mandatorily provided while creating a new listener using Enterprise Manager Database Control? (Choose three.)

- A. the port used by the listener
- B. the protocol used by the listener
- C. the server name where the listener runs
- D. the log file and trace file destination for the listener
- E. the database services to be registered with the listener

Answer: A, B, C

Question: 61

What are the consequences of executing the SHUTDOWN ABORT command? (Choose two.)

- A. The database files are synchronized.
- B. Uncommitted changes are not rolled back.
- C. The database is closed, but the instance is still started.
- D. Database buffers and redo buffers are not written to the disk.
- E. The database undergoes automatic media recovery during the next startup.

Answer: B, D

Question: 62

User SCOTT wants to export his objects using Oracle Data Pump and executes the following command:

```
$ expdp scott/tiger
directory = EXPORT_DIR
dumpfile = scott.dmp
include = table
include = view:"like '%DEPARTMENTS%'"
content = DATA_ONLY
```

Which task would the command accomplish?

- A. Oracle Data Pump would export only the data of all of the tables and views.
- B. Oracle Data Pump would export all of the table structures along with data and all the views.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- C. Oracle Data Pump would export the table data and the view definitions where the view name contains a string named DEPARTMENTS.
- D. Oracle Data Pump would export the table data and the view definitions with data where view name contains a string named DEPARTMENTS.
- E. Oracle Data Pump would export all of the table structures and the view definitions with data where view name contains a string named DEPARTMENTS.

Answer: C

Question: 63

View the Exhibit, and examine the alert messages.

You added space to the TEST tablespace to bring the space usage below the threshold value. Which statement is true about the Tablespace Full alert?

Alerts				
Category		All		
		Go Critical ✖ 1 Warning ⚠ 3		
Severity	Category	Name	Message	Alert Triggered
✖	User Defined Metrics	User Defined Numeric Metric	User Defined Metric Test_UDM returned a value of 46.	Jul 11, 2006 6:46:20 AM
⚠	Tablespaces Full	Tablespace Space Used (%)	Tablespace TEST is 37 percent full	Jul 11, 2006 3:11:55 AM
⚠	User Audit	Audited User	User SYS logged on from edtdr6p1.us.oracle.com.	Jul 11, 2006 2:25:39 AM
⚠	User Audit	Audited User	User SYS logged on from IN-ORACLEVINDL151E.	Jul 11, 2006 2:25:39 AM

- A. The alert is purged because it is a threshold alert.
- B. The alert is cleared and transferred to the alert log file.
- C. The alert is automatically cleared and sent to the alert history.
- D. The alert appears in Oracle Enterprise Manager Database Control until it is manually cleared.

Answer: C

Question: 64

In your database, the Log Writer (LGWR) process is unable to write to a member of a current redo log group due to read/write failure. Which two effects would you see in your database? (Choose two.)

- A. The database instance aborts.
- B. The database operation temporarily halts till the member becomes available.
- C. Writing proceeds as normal. LGWR writes to the available members of a group and ignores the unavailable members.
- D. The member would be marked as STALE and an error message would be written to the alert log file and LGWR trace file.
- E. The status of the group changes to INACTIVE and an error message would be written to the alert log file and LGWR trace file.

Answer: C, D

Question: 65

You executed the following command to start the database:

```
SQL> STARTUP
ORACLE instance started.
Total System Global Area 281018368 bytes
```

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Fixed Size 789000 bytes
Variable Size 229635576 bytes
Database Buffers 50331648 bytes
Redo Buffers 262144 bytes
ORA-00205: error in identifying controlfile, check alert log for more info

Which view would you query at this stage to investigate this missing control file?

- A. V\$INSTANCE
- B. V\$CONTROLFILE
- C. DBA_CONTROL_FILES
- D. V\$DATABASE_PROPERTIES
- E. V\$CONTROLFILE_RECORD_SECTION

Answer: B

Question: 66

Which statement is true about the loss of system-critical data files in ARCHIVELOG mode?

- A. The data files can be recovered till the last committed transaction.
- B. The data files can be recovered without shutting down the database.
- C. The data file is taken offline automatically; the database remains open.
- D. The data files can be recovered to the time of the most recent backup.

Answer: A

Question: 67

Which two statements about bigfile tablespaces are true? (Choose two.)

- A. The bigfile tablespace have only one data file.
- B. The segment space management is automatic.
- C. The extent management is dictionary managed.
- D. The database can have only one bigfile tablespace.
- E. The bigfile tablespace can be converted to a smallfile tablespace.

Answer: A, B

Question: 68

User A executes the following command to update the TRANS table:

```
SQL> UPDATE B.trans SET tr_amt=tr_amt+500 WHERE c_code='C005';
```

Before user A issues a COMMIT or ROLLBACK command, user B executes the following command on the TRANS table:

```
SQL> ALTER TABLE trans MODIFY (tr_type VARCHAR2(3));
```

What would happen in this scenario?

- A. The transaction for user A is rolled back.
- B. The ALTER TABLE command modifies the column successfully.
- C. The ALTER TABLE command fails due to the resource being busy.
- D. The ALTER TABLE command waits until user A ends the transaction.

Answer: C

Question: 69

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

You backed up the control file to trace. Which statement is true about the trace file generated?

- A. The trace file is in binary format.
- B. The trace file has a SQL script to re-create the control file.
- C. The trace file is a backup set created during the backup of the control file.
- D. The trace file contains the instructions to manually re-create the control file.
- E. The trace file is an image copy of the control file created during the backup of the control file.

Answer: B

Question: 70

You created a response file and want to check it before starting installations in silent mode. You started installation of Oracle software in interactive mode by providing the response file. In the middle of the installation, you realize that the behavior of the Oracle Universal Installer (OUI) is not consistent with the response file. What action would you take to detect the cause of this behavior?

- A. Compare the contents of the install.log file with the response file.
- B. Refer to the contents of the oraInst.loc file to verify the steps performed by OUI.
- C. Compare the contents of the installActions.log file with that of the response file.
- D. Refer to the alert log file for information regarding the actions performed by OUI during installation.

Answer: C

Question: 71

View the Exhibit and analyze the CREATE TABLE statements used to create the ITEMS and ORDERS tables. The ITEMS table has 50 rows and ORDERS table has 500 rows. Because you decide to not deal with the item code 188 in future, you execute the following command to remove the item: SQL> DELETE FROM items WHERE item_code=188; What is the effect of this command?

- A. The command fails with integrity violation error.
- B. The row containing the value 188 corresponding to the ITEM_CODE column is deleted from the ITEMS table, and the foreign key constraint is disabled in the ORDERS table.
- C. The row containing the value 188 corresponding to the ITEM_CODE column is deleted from the ITEMS table, and the dependent rows in the ORDERS table are also deleted automatically.
- D. The row containing the value 188 corresponding to the ITEM_CODE column is deleted from the ITEMS table, and the dependent rows in the ORDERS table are populated with NULL values in their ITEM_CODE columns.

Answer: C

Question: 72

Your database is open and users are connected using the LISTENER listener. The new DBA of the system stops the listener by using the following command:

LSNRCTL> STOP

What would happen to the sessions that are presently connected to the database instance?

- A. The sessions are able to perform only queries.
- B. The sessions are not affected and continue to function normally.
- C. The active transactions are rolled back and the sessions get terminated.
- D. The sessions are not allowed to perform any operations till the listener is started.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: B

Question: 73

You have been recently hired as a database administrator. Your senior manager asks you to study the production database server and submit a report on the settings done by the previous DBA. While observing the server settings, you find that the following parameter has been set in the parameter file of the database:

REMOTE_OS_AUTHENT = TRUE

What could have been the reason to set this parameter as TRUE?

- A. to enable operating system authentication for a remote client
- B. to restrict the scope of administration to identical operating systems
- C. to allow the start up and shut down of the database from a remote client
- D. to enable the administration of the operating system from a remote client
- E. to disable the administration of the operating system from a remote client

Answer: A

Question: 74

You are working on a database created with the Oracle Database 10g software in which the initialization parameter COMPATIBLE is set to 10.0.0. The hr_tbs tablespace in the database is created as follows:

```
CREATE TABLESPACE hr_tbs DATAFILE '/oracle/oradata/hr_tbs.dbf' SIZE 50M;
```

View the Exhibit to see the properties of the database.
Which statement is correct in this scenario?

SQL> SELECT * FROM database_properties;	
PROPERTY_NAME	PROPERTY_VALUE
DICT.BASE	2
DEFAULT_TEMP_TABLESPACE	TEMP
DEFAULT_PERMANENT_TABLESPACE	USERS
DEFAULT_TBS_TYPE	SMALLFILE
NLS_LANGUAGE	AMERICAN
NLS_TERRITORY	AMERICA
NLS_CURRENCY	\$
NLS_ISO_CURRENCY	AMERICA
NLS_NUMERIC_CHARACTERS	.,
NLS_CHARACTERSET	WE8ISO8859P1
NLS_CALENDAR	GREGORIAN

- A. hr_tbs is a bigfile tablespace.
- B. hr_tbs is a dictionary-managed tablespace.
- C. All the tablespaces in the database will be locally managed by default.
- D. All the tablespaces in the database must be of the smallfile tablespace type.
- E. The tablespace type bigfile or smallfile must be mentioned in the command.

Answer: C

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Question: 75

You perform differential incremental level 1 backups of your database on each working day and level 0 backup on Sundays. Which two statements are true about the differential incremental backups? (Choose two.)

- A. The backup performed on Sundays contains all the blocks that have ever been use in the database.
- B. The backup performed on Sundays contains all the blocks that have changed since the last level 1 backup.
- C. The backup performed on each working day contains all the blocks that have changed since the last level 0 or level 1 backup.
- D. The backup performed on each working day contains all the blocks that have changed since the last level 0 backup.

Answer: A, C

Question: 76

Users of HR schema complain about slower-than-normal performance. On investigation the DBA found that maintenance was recently performed on some of the tables. The DBA traced the query that takes longer than normal to execute.

View the Exhibit exhibit_before.

After the DBA resolves the problem, the query performs normally.

View the Exhibit exhibit_after.

What action would the DBA have taken to resolve the performance problem?

- A. analyzed the EMPLOYEES table to collect the current statistics
- B. moved the EMPLOYEES table in to a locally managed tablespace
- C. moved the EMPLOYEES table to another location in the same tablespace
- D. reorganized the associated indexes for the EMPLOYEES table that were in an unusable state
- E. moved the indexes associated with the EMPLOYEES table to the same tablespace where the EMPLOYEES table exists

Answer: D

Question: 77

Your database is having two control files, three redo log file groups with two members in each group. Failure of which file would cause an instance to shut down?

- A. any control file
- B. any archive log file
- C. one of the redo log members

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- D. loss of the initialization parameter file
- E. any data file belonging to the default permanent tablespace

Answer: A

Question: 78

Which two operations can be flashed back using the Flashback technology?
(Choose two.)

- A. DROP USER SMITH;
- B. DROP TABLE EMPLOYEES;
- C. DROP TABLESPACE USERS;
- D. ALTER TABLE SALES_REP DROP PARTITION P1;
- E. ALTER TABLE EMPLOYEES DROP COLUMN DESIG_ID;

Answer: A, B

Question: 79

Which two statements regarding the LOGGING clause of the CREATE TABLESPACE... statement are correct? (Choose two.)

- A. This clause is not valid for a temporary or undo tablespace.
- B. If the tablespace is in the NOLOGGING mode, no operation on the tablespace will generate redo.
- C. The tablespace will be in the NOLOGGING mode by default, if not specified while creating a tablespace.
- D. The tablespace-level logging attribute can be overridden by logging specifications at the table, index, materialized view, materialized view log, and partition levels.

Answer: A, D

Question: 80

Which two statements are true about the Automatic Database Diagnostic Monitor (ADDM)?
(Choose two.)

- A. The ADDM runs after each AWR snapshot is collected.
- B. The ADDM requires at least four AWR snapshots for analysis.
- C. The ADDM analysis provides only the diagnostic information but does not provide recommendations.
- D. The results of the ADDM analysis are stored in the Automatic Workload Repository (AWR).
- E. The ADDM calls other advisors if required, but does not provide recommendations about the advisors.

Answer: A, D

Question: 81

You want to refer the employee personal information stored in operating system(OS) files in EMPLOYEE table. You plan to add a new column to EMPLOYEE table to achieve this. Which data type would you use for the new column?

- A. BLOB
- B. CLOB
- C. BFILE
- D. LONG RAW

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: C

Question: 82

You want to monitor and control the resource usage by sessions. You want to be warned automatically when more than 100 sessions are opened with your database. What action would you take to achieve this?

- A. Use the Database Resource Manager.
- B. Set the limits in the profiles used by users.
- C. Modify the SESSIONS initialization parameter.
- D. Set the warning threshold for the Current Logons Count metric.

Answer: D

Question: 83

In your database, the STATISTICS_LEVEL initialization parameter is set to BASIC. What is the impact of this setting?

- A. The optimizer statistics are collected automatically.
- B. Only the timed operating system (OS) statistics and plan execution statistics are collected.
- C. The Oracle server dynamically generates the necessary statistics on tables as part of query optimization.
- D. The snapshots for the Automatic Workload Repository (AWR) are not generated automatically.
- E. Snapshots cannot be collected manually by using DBMS_WORKLOAD_REPOSITORY PACKAGE.

Answer: D

Question: 84

You are using flat files as the data source for one of your data warehousing applications. You plan to move the data from the flat file structures to an Oracle database to optimize the application performance. In your database you have clustered tables. While migrating the data, you want to have minimal impact on the database performance and optimize the data load operation. Which method would you use to load data into Oracle database?

- A. use the external table population
- B. use the Oracle Data Pump export and import utility
- C. use the conventional path data load of SQL*Loader utility
- D. use the direct path data load of Oracle export and import utility

Answer: C

Question: 85

Which two statements are true about the primary key constraint in a table? (Choose two.)

- A. It is not possible to disable the primary key constraint.
- B. It is possible to have more than one primary key constraint in a single table.
- C. The primary key constraint can be referred by only one foreign key constraint.
- D. The primary key constraint can be imposed by combining more than one column.
- E. The non-deferrable primary key constraint creates an unique index on the primary key column if it is not already indexed.

Answer: D, E

Question: 86

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

You are working on the 24X7 database with high transaction volume, to ensure faster instance recovery on your database you set the FAST_START_MTTR_TARGET initialization parameter to a very low value. What effect it will have on the database?

- A. The database performance would be enhanced.
- B. The redo log files would be get filled more frequently.
- C. The overall database performance would be degraded.
- D. The mean time to recover (MTTR) would be increased.

Answer: C

Question: 87

Data files of which three tablespaces can be recovered by performing an open recovery?
(Choose three.)

- A. TEMP
- B. UNDO
- C. INDEX
- D. SYSAUX
- E. SYSTEM

Answer: A, C, D

Question: 88

View the Exhibit.

Your Oracle 10g database has 6 tablespaces in which:

- TEMP is the default temporary tablespace
- UNDOTBS1 is the default undo tablespace
- USERS is the default permanent tablespace

In this database, which three tablespaces can be made offline? (Choose three.)

Edit View Delete Actions Add Datafile Go								
Select	Name	Type	Extent Management	Segment Management	Status	Size (MB)	Used (MB)	Used (%)
<input checked="" type="radio"/>	USERS	PERMANENT	LOCAL	AUTO	ONLINE	5.000	2.750	55.00
<input type="radio"/>	UNDOTBS1	UNDO	LOCAL	MANUAL	ONLINE	35.000	13.875	39.64

- A. TEMP
- B. PROD
- C. USERS
- D. SYSAUX

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- E. SYSTEM
- F. UNDOTBS1

Answer: B, C, D

Question: 89

The HR user creates a view with this command:

SQL> CREATE VIEW emp_v AS SELECT * FROM scott.emp;
Now HR wants to grant the SELECT privilege on the EMP_V view to the JIM user. Which statement is true in this scenario?

- A. HR can grant the privilege to JIM but without GRANT OPTION.
- B. HR can grant the privilege to JIM because HR is the owner of the view.
- C. SCOTT has to grant the SELECT privilege on the EMP table to JIM before this operation.
- D. HR needs the SELECT privilege on the EMP table with GRANT OPTION from SCOTT for this operation.

Answer: D

Question: 90

You executed the following command to back up your control file:

ALTER DATABASE BACKUP CONTROLFILE TO TRACE;
Which initialization parameter is used to specify the location of the trace file?

- A. USER_DUMP_DEST
- B. CORE_DUMP_DEST
- C. TRACE_DUMP_DEST
- D. BACKUP_DUMP_DEST
- E. BACKGROUND_DUMP_DEST

Answer: A

Question: 91

The junior DBA in your organization has accidentally deleted the alert log file. What will you do to create new alert log file?

- A. Create the new text file file as ALERT.LOG.
- B. You have to recover the alert log file from the valid backup.
- C. Change the value for the BACKGROUND_DUMP_DEST parameter.
- D. No action required. The file would be created automatically by the instance.

Answer: D

Question: 92

Which two statements regarding archive log destinations are true? (Choose two.)

- A. A maximum of 10 destinations can be specified.
- B. The archive logs must be written to all the destinations.
- C. The archive log files can be written only to local destinations.
- D. The archiving information can be traced to the alert log file whenever the archiving to a destination is successful.
- E. The number of archiving destinations must be equal to the number of archive processes (ARCn).

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: A, D

Question: 93

On which three can you use Recovery Manager (RMAN) to perform incremental backup?
(Choose three.)

- A. data files
- B. control files
- C. tablespaces
- D. password file
- E. parameter file
- F. whole database
- G. flashback log file
- H. archived log files
- I. change tracking file

Answer: A, C, F

Question: 94

You execute the following set of commands to create a database user and to grant the system privileges in your production environment.

```
SQL> CREATE USER user01
IDENTIFIED BY oracle
DEFAULT TABLESPACE tbs1
TEMPORARY TABLESPACE temp
PROFILE default
/
```

```
SQL> GRANT create session, create table TO user01;
```

While executing the command to create a table, the user gets the following error message and the

CREATE TABLE.. command fails.

ERROR at line 1:

ORA-01950: no privileges on tablespace

What could be the possible reason for this error message?

- A. The tablespace TBS1 is full.
- B. The user is not the owner of the SYSTEM tablespace.
- C. The user does not have quota on the TBS1 tablespace.
- D. The user does not have sufficient system privileges to create table in the TBS1 tablespace.
- E. The user does not have sufficient privileges to create table on the default permanent tablespace.

Answer: C

Question: 95

The user SCOTT executes the following command successfully to increase the salary values in one of his sessions:

```
SQL> UPDATE emp SET sal=sal*1.15 WHERE deptno=20;
```

Before SCOTT ends the transaction, user HR who has the privileges on EMP table executes a query to fetch the salary details but finds the old salary values instead of the increased values.

Why does HR still see the old data?

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- A. because of redo data from redo log file
- B. because of data from database buffer cache
- C. because of data from a temporary tablespace
- D. because of undo data from the undo tablespace

Answer: D

Question: 96

You specified segment space management as automatic for a tablespace. What effect would this have on space management?

- A. Extents would be managed by the freelists.
- B. The segment would be managed by bitmaps.
- C. The segment would be managed by the freelists.
- D. Free space would be managed by the data dictionary.

Answer: B

Question: 97

Your alert log file has the following information:

Tue May 25 17:43:38 2004
ORA-00060: Deadlock detected. More info in file
/u01/app/oracle/admin/ORCL/udump/orcl_ora_3173.trc.

What would you do to ensure that database is still running correctly?

- A. examine the trace file and kill the session that caused the deadlock
- B. examine the trace file and kill both the sessions responsible for the deadlock
- C. examine the trace file for details and ask the user who caused the deadlock to roll back the transaction
- D. examine the trace file for details and remember that deadlocks are resolved automatically by Oracle database
- E. examine the trace file for details and use the Undo Advisor to rollback the transaction that caused the deadlock

Answer: D

Question: 98

Which two are valid locking levels that are used by transactions in an Oracle database? (Choose two.)

- A. row level
- B. block level
- C. object level
- D. schema level
- E. database level

Answer: A, C

Question: 99

Redo log files are not multiplexed in your database. Redo log blocks are corrupted in group 2, and archiving has stopped. All the redo logs are filled and database activity is halted. Database writer has written everything to disk. Which command would you execute to proceed further?

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- A. RECOVER LOGFILE BLOCK GROUP 2;
- B. ALTER DATABASE DROP LOGFILE GROUP 2;
- C. ALTER DATABASE CLEAR LOGFILE GROUP 2;
- D. ALTER DATABASE RECOVER LOGFILE GROUP 2;
- E. ALTER DATABASE CLEAR UNARCHIVED LOGFILE GROUP 2;

Answer: E

Question: 100

In the middle of a transaction, a user session was abnormally terminated but the instance is still up and the database is open. Which two statements are true in this scenario? (Choose two.)

- A. Event Viewer gives more details on the failure.
- B. The alert log file gives detailed information about the failure.
- C. PMON rolls back the transaction and releases the locks.
- D. SMON rolls back the transaction and releases the locks.
- E. The transaction is rolled back by the next session that refers to any of the blocks updated by the failed transaction.
- F. Data modified by the transaction up to the last commit before the abnormal termination is retained in the database.

Answer: C, F

Question: 101

The ST_INFO master table has millions of rows that are updated very rarely. It has a STATE_CODE column that contains the value for 25 states. The table is frequently queried on the STATE_CODE column. Which type of index would you suggest to improve the query performance?

- A. B-tree
- B. bitmap
- C. reverse key
- D. function based

Answer: B

Question: 102

You scheduled a backup by using the Schedule Backup option in Oracle Enterprise Manager. Which statement about the script created by Oracle Enterprise Manager is true?

- A. It is a SQL script.
- B. It is a PL/SQL file.
- C. It is an operating system (OS) file.
- D. It is a Recovery Manager (RMAN) script.

Answer: D

Question: 103

View the Exhibit to see the source and target databases.

You have created a database link, devdb.us.oracle.com, between the databases PRODDb and DEVDB.

You want to import schema objects of the HR user using Oracle Data Pump from the development database, DEVDB, to the production database, PRODDb. You execute the following command on the target database server:

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

\$impdp system/manager directory = DB_DATA
 dumpfile = schemas.dat
 schemas = hr
 flashback_time = 2004-02-03 09:00

The command fails, displaying the following error:

ORA-39001: invalid argument value
 ORA-39000: bad dump file specification
 ORA-31640: unable to open dump file "/home/oracle/schema/schemas.dat" for read
 ORA-27037: unable to obtain file status

What would you do to overcome the error?

- A. remove the dumpfile option in the command
- B. remove the flashback_time option in the command
- C. add the user, SYSTEM, to the schemas option in the command
- D. add network_link = devdb.us.oracle.com option in the command
- E. remove the schemas option and add the network_link = devdb.us.oracle.com option in the command
- F. remove the dumpfile option and add the network_link = devdb.us.oracle.com option in the command

Answer: F

Question: 104

Your database instance is started using the server parameter file (SPFILE). Control files are multiplexed and stored on different disks. Because of a disk failure, you lost one of these control files. You replaced the damaged disk. What is the correct sequence of steps that you would follow to recover the control file?

1. Shut down the instance, if not already done.
2. Copy one of the remaining control files to a new location.
3. Change the value of the CONTROL_FILES initialization parameter to correspond to the new location of the control files.
4. Start up the database instance to the NOMOUNT stage.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

5. Recover the database to the point of failure of the control file.
6. Open the database.

- A. 5,2,3,4
- B. 1,2,4,3,5
- C. 2,4,3,4,5
- D. 4,5,6,2,3

Answer: B

Question: 105

You plan to use static database registration for a new listener when you create it. What could be the two reasons for this? (Choose two.)

- A. More than one database is to be registered with the listener.
- B. The users will connect the database by using the host naming method.
- C. The Oracle Enterprise Manager is to be used to monitor an Oracle9i database.
- D. The database that is to be registered with the listener is configured in shared server mode.
- E. The listener is not configured on the default port of 1521 and the instance is not configured to register with a nondefault port.

Answer: C, E

Question: 106

Which statement is true when you run the SQL Tuning Advisor with limited scope?

- A. Access path analysis is not performed for the SQL statements.
- B. SQL structure analysis is not performed for the SQL statements.
- C. SQL Profile recommendations are not generated for the SQL statements.
- D. The staleness and absence of the statistics are not checked for the objects in the query supplied to the SQL Tuning Advisor.

Answer: C

Question: 107

Your database is running under automatic undo management and the UNDO_RETENTION parameter is set to 900 sec. You executed the following command to enable retention guarantee:
SQL> ALTER TABLESPACE undotbs1 RETENTION GUARANTEE;
What effect would this statement have on the database?

- A. The extents in undo tablespace retain data until the next full database backup.
- B. The extents containing committed data in the undo tablespace are never overwritten.
- C. The extents which no longer contain uncommitted data in the undo tablespace are not overwritten for at least 15 minutes.
- D. The extents containing committed data in the undo tablespace are not overwritten until the instance is shut down.

Answer: C

Question: 108

Your database is in NOARCHIVELOG mode and a logswitch happens every 20 minutes. On Thursday morning, media failure resulted in corruption of a data file belonging to the TOOLS tablespace. Backups are taken on every Sunday. What would you do in this situation?

- A. recover using Oracle Flashback Database technology

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- B. restore the data files from backup and perform a complete recovery
- C. restore only the corrupted data file and perform tablespace recovery
- D. restore the data files from backup and perform cancel-based recovery
- E. restore the entire database from the most recent backup and start the instance and open the database

Answer: E

Question: 109

View this parameter setting in your database:

DB_CREATE_FILE_DEST='D:\oracle\product\10.2.0\oradata\oracle'

You created a tablespace by using this command:

CREATE TABLESPACE USERS;

Which two statements are true about the USERS tablespace? (Choose two.)

- A. The tablespace has two data files.
- B. An error is reported and tablespace creation fails.
- C. Data files are created with names generated by the instance.
- D. The tablespace can be extended without specifying the data file.
- E. Data files belonging to the USERS tablespace cannot be renamed.

Answer: C, D

Question: 110

Which two operations can be flashed back using the Flashback technology? (Choose two.)

- A. DROP USER SMITH;
- B. DROP TABLE EMPLOYEES;
- C. DROP TABLESPACE USERS;
- D. ALTER TABLE SALES_REP DROP PARTITION P1;
- E. ALTER TABLE EMPLOYEES DROP COLUMN DESIG_ID;

Answer: A, B

Question: 111

You specified extent management as local for a tablespace. How will it affect space management in the tablespace?

- A. All the extents will be of the same size.
- B. Bitmap will be used to record free and allocated extents.
- C. Free extents will be managed by the data dictionary tables.
- D. The tablespace will be system managed and the users cannot specify the extent size.

Answer: B

Question: 112

Which three statements are true regarding the logical structure of the Oracle database? (Choose three.)

- A. Each segment contains one or more extents.
- B. Multiple tablespaces can share single data file.
- C. A data block is the smallest unit of I/O for data files.
- D. It is possible to have tablespaces of different block sizes in a database.
- E. Each data block in the database always corresponds to one OS block.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: A, C, D

Question: 113

Users of HR schema complain about slower-than-normal performance. On investigation the DBA found that maintenance was recently performed on some of the tables. The DBA traced the query that takes longer than normal to execute.

View the Exhibit exhibit_before.

After the DBA resolves the problem, the query performs normally.

View the Exhibit exhibit_after.

What action would the DBA have taken to resolve the performance problem?

- A. analyzed the EMPLOYEES table to collect the current statistics
- B. moved the EMPLOYEES table in to a locally managed tablespace
- C. moved the EMPLOYEES table to another location in the same tablespace

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- D. reorganized the associated indexes for the EMPLOYEES table that were in an unusable state
- E. moved the indexes associated with the EMPLOYEES table to the same tablespace where the EMPLOYEES table exists

Answer: D

Question: 114

You have to shut down the database instance with the ABORT option because of a hardware failure. Which statement is true about the subsequent opening of the database?

- A. The database would open normally.
- B. The database would not open, and it would stop at mount stage.
- C. The database would open after automatically performing instance recovery.
- D. The database would not open, and you have to perform database recovery to open it.

Answer: C

Question: 115

What is the implication of setting the initialization parameter FAST_START_MTTR_TARGET to 0 in your database?

- A. MTTR Advisor would be disabled.
- B. Redo Log Advisor would be disabled.
- C. Automatic tuning of checkpoint would be disabled.
- D. Checkpoint information would not be written to the alert log file.

Answer: C

Question: 116

You require the Oracle server to manage the undo segments and space among various active sessions automatically. You created an undo tablespace, UNDO_TBS1, in your database. Which two additional steps would you perform to achieve this? (Choose two.)

- A. Set the UNDO_RETENTION parameter to 900 or more.
- B. Create an initial undo segment in the undo tablespace.
- C. Enable the retention guarantee for the undo tablespace.
- D. Set the UNDO_TABLESPACE parameter to UNDO_TBS1.
- E. Set the UNDO_MANAGEMENT initialization parameter to AUTO.

Answer: D, E

Question: 117

You want to set up the Oracle Database 10g installation to follow the French language, with France as the territory, and the date to be displayed in French for all users' sessions. Which environmental variable would you set to achieve this objective?

- A. NLS_LANG
- B. NLS_LANGUAGE
- C. NLS_TERRITORY
- D. NLS_CHARACTERSET
- E. NLS_DATE_LANGUAGE
- F. NLS_LENGTH_SEMANTICS
- G. NLS_NCHAR_CHARACTERSET

Answer: A

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Question: 118

The HR user owns the EMP table. The HR user grants privileges to the SCOTT user by using this command:

```
SQL> GRANT SELECT,INSERT,UPDATE ON emp TO scott WITH GRANT OPTION;
```

The SCOTT user executes this command to grant privileges to the JIM user:

```
SQL> GRANT SELECT,INSERT,UPDATE ON hr.emp TO jim;
```

Now the HR user decides to revoke privileges from JIM by using this command:

```
SQL> REVOKE SELECT,INSERT,UPDATE ON emp FROM jim;
```

Which statement is true after HR issues the REVOKE command?

- A. The command succeeds and privileges are revoked from JIM.
- B. The command fails because SCOTT still has privileges with him.
- C. The command fails because HR cannot revoke the privileges from JIM.
- D. Only HR can perform SELECT, INSERT, and UPDATE operations on the EMP table.

Answer: C

Question: 119

You define an alert to be raised when the USERS tablespace usage has reached 80% of the total space. Which area would you refer to, in order to confirm that the alert has been raised due the event?

- A. the alert.log file
- B. the DBA_ALERTS view
- C. the Database Control Home page
- D. the Database Control performance page
- E. the Database Control Maintenance page

Answer: C

Question: 120

A user wants to connect to the database instance from an application that is running on a remote machine. Which tools should the DBA use to establish the required configuration to ensure that the user is able to connect to the database instance? (Choose two.)

- A. Data Pump
- B. Oracle Net Manager
- C. Oracle Enterprise Manager
- D. Oracle Universal Installer (OUI)
- E. Database Configuration Assistant (DBCA)

Answer: B, C

Question: 121

In the PROD database you have granted the RESUMABLE system privilege to the CONNECT role. Resumable space operation has been enabled for all user sessions. You want users NOT to be aware of any kind of space-related problems while performing transactions. Instead, you want the problem to be resolved by a database trigger automatically. Which combination of triggering time and event would you use to achieve this objective?

- A. AFTER CREATE
- B. AFTER SUSPEND
- C. BEFORE CREATE
- D. AFTER TRUNCATE

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- E. BEFORE SUSPEND
- F. AFTER INSERT OR DELETE OR UPDATE
- G. BEFORE INSERT OR DELETE OR UPDATE

Answer: B

Question: 122

In your database, the snapshot interval is set to 10 minutes for the Automatic Workload Repository (AWR). The database instance is running for the past 30 days. View the Exhibit to examine the Automatic Database Diagnostic Monitor (ADDM) task. The ADDM task is performed every 10 minutes, except the last task. What could be the reason for this?

Results								
View Result Delete Actions Re-schedule Go								
Select	Advisory Type	Name	Description	User	Status	Start Time	Duration (seconds)	Expires In (days)
<input checked="" type="radio"/>	ADDM	ADDM:1090770270_1_910	ADDM auto run: snapshots [909, 910], instance 1, database id 1090770270	SYS	COMPLETED	Jul 7, 2006 7:08:14 AM	0	30
<input type="radio"/>	ADDM	ADDM:1090770270_1_909	ADDM auto run: snapshots [908, 909], instance 1, database id 1090770270	SYS	COMPLETED	Jul 7, 2006 4:50:57 AM	0	30

- A. The snapshot retention period for the AWR was increased before the last task.
- B. The optimizer statistics for few objects in the database were locked before the last task.
- C. The STATISTICS_LEVEL initialization parameter was changed to BASIC and reset to TYPICAL before the last task.
- D. The optimizer statistics was collected manually by using the DBMS_STATS package before the last task.

Answer: C

Question: 123

Which two statements are true regarding the SGA_TARGET initialization parameter? (Choose two.)

- A. It can be increased up to the value of the SGA_MAX_SIZE parameter.
- B. Increasing the value of SGA_TARGET up to the value of SGA_MAX_SIZE disables the automatic shared memory management feature.
- C. Reducing the value of the SGA_TARGET parameter takes away memory from both autotuned and manually sized components.
- D. Increasing the value of the SGA_TARGET parameter distributes the increased memory among all the autotuned components.

Answer: A, D

Question: 124

The employee IDs of employees who have made sales in the company are transferred from the EMPLOYEES table to the BONUS table with a default bonus value. Later, the human resources department decides to give bonuses to employees as per the following conditions:

1. Employees with a salary of \$8,000 or less should receive a bonus.
2. Employees who have not made sales get a bonus of 1% of their salary.
3. Employees who already made sales get an increase in their bonus equal to 1% of their salary.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

What would you do to implement these changes in one step?

- A. Use SQL*Loader utility.
- B. Use the MERGE statement.
- C. Use a multitable insert operation.
- D. Use a correlated UPDATE statement.

Answer: B

Question: 125

After being hired as a database administrator, you find that there is only one database that is functional and that is being accessed by the applications. You want to create a replica of the database, to be used for testing purposes. What is the best method to create the replica?

- A. create a database by using CREATE DATABASE .. command and manually copy the data
- B. use Database Configuration Assistant (DBCA) to create a template from the existing database to contain the database structure
- C. use DBCA to create a template from the existing database to contain the database structure and then manually copy the data using Oracle Data Pump
- D. use DBCA to create a template from the existing database to contain the database structure with data files and then use the same template to create the database in the new location

Answer: D

Question: 126

You want to create a tablespace with the following specifications:

1. The tablespace extends automatically.
2. Used and free extents should be managed by bitmaps.
3. Default PCTUSED attribute is set to 60.
4. All the extents would be of size 1 MB.

Which three options would you choose to create the tablespace? (Choose three.)

- A. tablespace with AUTOEXTEND enabled
- B. tablespace with dictionary-managed extents
- C. tablespace with a uniform extent allocation of 1 MB
- D. tablespace with segment space management as manual
- E. tablespace with segment space management as automatic

Answer: A, C, D

Question: 127

Your database is open, and you plan to perform Recovery Manager (RMAN) backups. Which three statements are true about these backups? (Choose three.)

- A. The backups would be consistent.
- B. The backups would be inconsistent.
- C. The backups need to be restored and database has to be recovered in case of a media failure.
- D. The backups need not be restored during recovery in case of a media failure.
- E. The backups would be possible only if the database is running in ARCHIVELOG mode.
- F. The backups would be possible only if the database is running in NOARCHIVELOG mode.

Answer: B, C, E

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Question: 128

Which two database operations can be performed at the MOUNT stage of database startup? (Choose two.)

- A. renaming of data files
- B. dropping the database user
- C. renaming of control files
- D. multiplexing of control files
- E. configuring the database in ARCHIVELOG mode

Answer: A, E

Question: 129

Which two statements are true regarding a PL/SQL package body? (Choose two.)

- A. It cannot be created without a package specification.
- B. It cannot invoke subprograms defined in other packages.
- C. It can contain only the subprograms defined in the package specification.
- D. It can be changed and recompiled without making the package specification invalid.

Answer: A, D

Question: 130

You want to protect your database from single point of failure by multiplexing the control file. Your database is started using SPFILE. You have to perform the following tasks:

1. Shut down the database instance.
2. Copy the control file to new location.
3. Configure the CONTROL_FILES parameter.
4. Restart the instance.

Select the correct order in which these tasks need to be performed.

- A. 1,2,3,4
- B. 3,2,1,4
- C. 3,1,2,4
- D. 2,3,1,4

Answer: C

Question: 131

In your Oracle 10g database , you have scheduled a job to update the optimizer statistics at 05:00 pm every Friday. The job has successfully completed. Which three pieces of information would you check to confirm that the statistics have been collected? (Choose three.)

- A. average row size
- B. last analyzed date
- C. size of table in bytes
- D. size of table in database blocks
- E. number of free blocks in the free list
- F. number of extents present in the table

Answer: A, B, D

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Question: 132

View the Exhibit to observe the roles assigned to the SCOTT user.

Which statement is true about the assignment of the SELECT_CATALOG_ROLE role to the SCOTT user?

Database Instance: oracle > Users > Edit User: SCOTT Logged in As SYS

Edit User: SCOTT

Actions: Create Like Go Show SQL Revert Apply

[General](#) **[Roles](#)** [System Privileges](#) [Object Privileges](#) [Quotas](#) [Consumer Groups](#) [Switch](#)

[Edit List](#)

Role	Admin Option	Default
CONNECT	<input type="checkbox"/>	<input checked="" type="checkbox"/>
RESOURCE	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SELECT_CATALOG_ROLE	<input type="checkbox"/>	<input type="checkbox"/>

[General](#) **[Roles](#)** [System Privileges](#) [Object Privileges](#) [Quotas](#) [Consumer Groups](#) [Switch](#)

Actions: Create Like Go Show SQL Revert Apply

- A. The user cannot use the role at all.
- B. The user can grant the role to other users.
- C. The user needs to enable the role explicitly.
- D. The user can start using the role immediately.

Answer: C

Question: 133

View the Exhibit.

Which statement causes more undo generation?

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

```
SQL> SELECT * FROM emp;
```

EMPNO	ENAME	JOB	MGR	HIREDATE	SAL	COMM	DEPTNO
7369	SMITH	CLERK	7902	17-DEC-80	800		20
7499	ALLEN	SALESMAN	7698	20-FEB-81	1600	300	30
7521	WARD	SALESMAN	7698	22-FEB-81	1250	500	30
7566	JONES	MANAGER	7839	02-APR-81	2975		20
7654	MARTIN	SALESMAN	7698	28-SEP-81	1250	1400	30
7698	BLAKE	MANAGER	7839	01-MAY-81	2850		30
7782	CLARK	MANAGER	7839	09-JUN-81	2450		10
7788	SCOTT	ANALYST	7566	19-APR-87	3000		20
7839	KING	PRESIDENT		17-NOV-81	5000		10
7844	TURNER	SALESMAN	7698	08-SEP-81	1500	0	30
7876	ADAMS	CLERK	7788	23-MAY-87	1100		20

EMPNO	ENAME	JOB	MGR	HIREDATE	SAL	COMM	DEPTNO
7900	JAMES	CLERK	7698	03-DEC-81	950		30
7902	FORD	ANALYST	7566	03-DEC-81	3000		20
7934	MILLER	CLERK	7782	23-JAN-82	1300		10

```

14 rows selected.

SQL> DELETE FROM emp WHERE empno=7934;

1 row deleted.

SQL> UPDATE emp SET comm=400 WHERE empno=7844;

1 row updated.

SQL> INSERT INTO emp VALUES(7999,'JHON','CLERK',7782,'10-MAY-83',1500,NULL,10);

1 row created.
```

- A. SELECT * FROM emp;
- B. DELETE FROM emp WHERE empno=7934;
- C. UPDATE emp SET comm=400 WHERE empno=7844;
- D. INSERT INTO emp VALUES(7999,'JHON','CLERK',7782,'10-MAY-83',1500,NULL,10);

Answer: B

Question: 134

In which situation would you use the Oracle Shared Server configuration?

- A. when performing export and import using Oracle Data Pump
- B. when performing backup and recovery operations using Oracle Recovery Manager
- C. when performing batch processing and bulk loading operation in a data warehouse environment
- D. in an online transaction processing (OLTP) system where large number of client sessions are idle most of the time

Answer: D

Question: 135

Which two statements about Recovery Manager (RMAN) backups are true? (Choose two.)

- A. Online redo log files can be backed up.
- B. Archived redo log files are backed up.
- C. Only used data blocks can be backed up as backup sets.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

- D. Only consistent database backups can be performed.
- E. RMAN backup can be taken only if the database is configured in ARCHIVELOG mode.

Answer: B, C

Question: 136

The session of user SCOTT receives the following error after executing an UPDATE command on the EMP table:

ERROR at line 1:

ORA-00060: deadlock detected while waiting for resource

On investigation, you find that a session opened by user JIM has a transaction that caused the deadlock.

Which two statements are true regarding the session of SCOTT in this scenario? (Choose two.)

- A. It is terminated after receiving the error and JIM can continue with his transaction.
- B. The transaction in it is terminated after receiving the error and JIM can continue with his transaction.
- C. SCOTT should perform a COMMIT or ROLLBACK to allow JIM to continue with his transaction.
- D. SCOTT has to reexecute the last command in the transaction after he commits the transaction.

Answer: C, D

Question: 137

View the Exhibit to examine the output of the DBA_OUTSTANDING_ALERT view.

After 30 minutes, you executed the following command:

```
SQL> SELECT reason,metric_value FROM dba_outstanding_alerts;
REASON METRIC_VALUE
```

```
-----
Tablespace [TEST] is [28 perce
nt] full
```

What could be the two reasons for the elimination of the other rows in the output? (Choose two.)

SQL> SELECT reason,metric_value FROM dba_outstanding_alerts;	
REASON	METRIC_VALUE

Tablespace [TEST] is [28 perce nt] full	28.125
Metrics "Current Logons Count" is at 29	29
Metrics "Database Time Spent W aiting (%)" is at 99.03754 for event class "Application"	99.0375405

- A. The threshold alert conditions are cleared.
- B. The threshold alerts are transferred to DBA_ALERT_HISTORY.
- C. The non-threshold-based alerts are transferred to DBA_ALERT_HISTORY.
- D. The threshold alerts related to database metrics are permanently stored in DBA_ALERT_HISTORY but not the threshold alerts related to instance metrics.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Answer: A, B

Question: 138

Your tnsnames.ora file has the following entry for the service alias ORCL:

```
ORCL =
( DESCRIPTION =
( ADDRESS = (PROTOCOL = TCP)(HOST = 10.156.24.216)(PORT = 1521))
( CONNECT_DATA =
( SERVER = DEDICATED)
( SERVICE_NAME = orcl.oracle.com)
)
)
```

The TNSPING command executes successfully when tested with ORCL but you are not able to connect to the database instance with the following command:

```
SQL> CONNECT scott/tiger@orcl
```

What could be the reason for this?

- A. The listener is not running at the server.
- B. The TNS_ADMIN environmental variable is set to a wrong value.
- C. The orcl.oracle.com database service is not registered with the listener.
- D. The DEFAULT_DOMAIN parameter is set to a wrong value in the SQLNET.ORA file.

Answer: C

Question: 139

The SCOTT user has an index on the ITEM_DESC column of the ITEM table. As part of the year-ending task, SCOTT updates the ITEM_DESC column for most of the rows in the ITEM table. How does this change to the table affect the index?

- A. An update in a leaf row takes place.
- B. The index becomes invalid after the update.
- C. The leaf block containing the row to be updated is marked as invalid.
- D. A row in the leaf block of the index for the key value is deleted and inserted.

Answer: D

Question: 140

When you try to start the Database Control by using the emctl start

dbconsole command the following error is displayed:

TZ set to America/New_york OC4J Configuration issue.

/u01/app/oracle/product/10.1.0/db_1/oc4j/j2ee/OC4J_DBConsole_orcl.us.oracle.com not found.

Which two environment variables do you need to set appropriately to avoid such errors, and start the Database Control successfully? (Choose two.)

- A. NLS_LANG
- B. ORACLE_SID
- C. ORACLE_HOME
- D. ORACLE_BASE
- E. LD_LIBRARY_PATH

Answer: B, C

Question: 141

View the Exhibit to see the structure of the EMPLOYEES and DEPARTMENTS tables.

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Your organization plans to dissolve the department with department ID 30. You execute the following command to delete rows from the DEPARTMENTS table:

```
SQL>delete from DEPARTMENTS where DEPT_ID = 30;
```

The command fails and displays the following error:

ERROR at line 1:

ORA-02292: integrity constraint (HR.SYS_C005374) violated - child record found

Which two actions would you take to overcome this error? (Choose two.)

<u>Employees</u>		
Column Name	Datatype	Constraint
Emp_id	Number	Primary Key
Emp_name	Varchar2	Not Null
Salary	Number	Check (Salary between 1000 and 12000)
Designation	Varchar2	Not Null
Department_id	Number	Reference DEPARTMENTS (DEPT_ID)

<u>Departments</u>		
Column Name	Datatype	Constraint
Dept_id	Number	Primary Key
Dept_name	Varchar2	Not Null
Location	Varchar2	Not NULL

- A. alter the foreign key constraint to include the cascade option
- B. alter the foreign key constraint to include the on delete cascade option
- C. first, drop the EMPLOYEES table and then delete the rows from the DEPARTMENTS table
- D. first, drop the DEPARTMENTS table and then delete the rows from the EMPLOYEES table
- E. first, delete all of the rows from EMPLOYEES table and then delete the rows from the DEPARTMENTS table for department id 30
- F. first, delete rows from the EMPLOYEES table for department id 30 and then delete the rows from the DEPARTMENTS table for department id 30

Answer: B, F

Question: 142

View the Exhibit.

The DBA creates a new user as follows:

```
SQL> CREATE USER manfus IDENTIFIED BY manfus TEMPORARY TABLESPACE temp;
```

User manfus creates a table as follows:

```
SQL> CREATE TABLE material(id NUMBER(3));
```

In which tablespace will the material table be created?

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

```
SQL> SELECT * FROM database_properties;
```

PROPERTY_NAME	PROPERTY_VALUE
DICT.BASE	2
DEFAULT_TEMP_TABLESPACE	TEMP
DEFAULT_PERMANENT_TABLESPACE	USERS
DEFAULT_TBS_TYPE	SMALLFILE
NLS_LANGUAGE	AMERICAN
NLS_TERRITORY	AMERICA
NLS_CURRENCY	\$
NLS_ISO_CURRENCY	AMERICA
NLS_NUMERIC_CHARACTERS	.,
NLS_CHARACTERSET	WE8ISO8859P1
NLS_CALENDAR	GREGORIAN

```
SQL> SELECT tablespace_name FROM dba_tablespaces;
```

TABLESPACE_NAME
SYSTEM
UNDOTBS1
SYSAUX
TEMP
USERS
PROD

```
SQL> SELECT username,default_tablespace FROM dba_users;
```

USERNAME	DEFAULT_TABLESPACE
SYSTEM	SYSTEM
SYS	SYSTEM
OLAPSYS	SYSAUX
SYSMAN	SYSAUX
HR	USERS
OUTLN	SYSTEM
ANONYMOUS	SYSAUX
CTXSYS	SYSAUX
SCOTT	USERS
PRODUS	PROD

- A. TEMP
- B. PROD
- C. USERS
- D. SYSAUX
- E. SYSTEM

Answer: C

Question: 143

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

You want to move all the objects of the APPS user in the test database to the DB_USER schema of the production database. Which option of IMPDP would you use to accomplish this task?

- A. FULL
- B. SCHEMAS
- C. REMAP_SCHEMA
- D. REMAP_DATAFILES
- E. REMAP_TABLESPACE

Answer: C

Question: 144

Your database is not configured for session failover. Your tnsnames.ora file contains the following details:

```
test.us.oracle.com=
(DESCRIPTION=
(ADDRESS_LIST=
(LOAD_BALANCE=off)
(FAILOVER=ON)
(ADDRESS=(PROTOCOL=tcp)(HOST=test1-server)(PORT=1521))
(ADDRESS=(PROTOCOL=tcp)(HOST=test2-server)(PORT=1521)))
(CONNECT_DATA=(SERVICE_NAME=test.us.oracle.com)))
```

Which feature is enabled in this case?

- A. Load balancing
- B. Instance failover
- C. Database failover
- D. Connect-time failover
- E. Transparent Application Failover (TAF)

Answer: D

Question: 145

Which is the memory area that is created when a dedicated server process is started, and contains data and control information for that server process?

- A. SGA
- B. PGA
- C. Shared Pool
- D. Streams Pool

Answer: B

Question: 146

A user complains about getting this error after issuing a certain SQL statement: ORA-02393: exceeded call limit on CPU usage Because of the error, the SQL statement gets aborted. What action would you take to increase the CPU usage limit in the subsequent sessions of the user?

- A. Modify the resource limit in the profile used by the user.
- B. Set the RESOURCE_LIMIT initialization parameter to FALSE.
- C. Increase the value of the SESSION_CACHED_CURSORS initialization parameter.
- D. Increase the value of the SESSION_MAX_OPEN_FILES initialization parameter.

Answer: A

Exam Name:	Oracle Database 10g: Administration 1		
Exam Type:	Oracle		
Exam Code:	1Z0-042	Total Questions	150

Question: 147

Your database is functional with peak load for one hour. You want to preserve the performance statistics collected during this period so that they can be used for comparison while analyzing the performance of the database in the future. What action would you take to achieve this task?

- A. Set the STATISTICS_LEVEL initialization parameter to ALL.
- B. Create a baseline on a pair of snapshots that have the statistics of the peak-load period in the database.
- C. Decrease the snapshot interval in the AWR to collect more number of snapshots during the peak-load period.
- D. Set the snapshot retention period in the Automatic Workload Repository (AWR) to zero to avoid the automatic purging of the snapshots.

Answer: B

Question: 148

Which three statements are true regarding the fine-grained auditing (FGA)? (Choose three.)

- A. FGA is possible on SELECT statements only.
- B. The audit trail for FGA is stored in the FGA_LOG\$ table.
- C. The audit trail for FGA is stored in the AUD_LOG\$ table.
- D. FGA enables a SQL predicate to define when to audit an event.
- E. FGA audits DELETE statements only when audit columns are specified.
- F. FGA includes the SQL statement used by the user as part of the audit event entry.

Answer: B, D, F

Question: 149

Which two statement about Automatic Storage Management (ASM) are true? (Choose two.)

- A. ASM provides mirroring on file by file basis.
- B. ASM provides automatic load balancing across all ASM disks.
- C. ASM supports the Oracle database and operating system files.
- D. ASM can be used to store trace files, alert log files, and the server parameter file (SPFILE).

Answer: A, B

Question: 150

Which three descriptions are correct about the effects of the TRUNCATE command on a table? (Choose three.)

- A. The corresponding indexes for the table are also truncated.
- B. Delete triggers on the table are fired during the execution of the TRUNCATE command.
- C. Very little or no undo data is generated during the execution of the TRUNCATE command.
- D. The child table is truncated when the TRUNCATE command is applied on the parent table.
- E. The high-water mark (HWM) is set to point to the first useable data block in the table segment.

Answer: A, C, E

End of Document
